

Q1: TEST PLAN

EverShop Demo Store

<https://demo.evershop.io/>

Quality Assurance Test Plan Document

Document Version	1.0
Prepared By	Antara Aditya
Date	September 2, 2026
Application Under Test	EverShop Demo (demo.evershop.io)
Status	Draft for Review

1. Introduction

1.1 Purpose

This document defines the test strategy, scope, resources, and deliverables for validating the functionality, usability, and reliability of the EverShop demo storefront at <https://demo.evershop.io/>. It serves as the reference for all QA activities performed against this application under test (AUT).

1.2 Application Overview

The AUT is a live demo instance of EverShop, an open-source online shopping website. Based on exploration of the site, it exposes a standard storefront (homepage banners, category browsing, product detail pages with variant selection, cart, PayPal checkout) and a customer account area (login, registration, password reset). Since this is a public demo environment, testing must avoid destructive actions (e.g., real orders/charges) unless a sandboxed payment mode is confirmed.

1.3 Objectives

- Validate core storefront browsing and navigation (home, categories, product pages).
- Validate product variant selection, quantity input, and add-to-cart behavior.
- Validate cart and checkout flow, including PayPal payment integration.
- Validate account registration, login, logout, and password reset.
- Verify responsive behavior across desktop, tablet, and mobile viewports.
- Identify functional, usability, and performance defects prior to any production use.

2. Scope

2.1 In Scope — Observed Site Areas

Area	URL / Location	Notes
Homepage	/	Hero banners/carousel, category shortcuts (Women, Men, Kids), Featured Products grid
Category Browsing	/women, /men, /kids, /accessories	Product listing, likely filters/sorting
Product Detail Page	e.g. /kids/stainless-steel-thermos-yellow	SKU, price, color variant swatches, quantity, Add to cart, related products ("You may also like")
Cart / Checkout	Cart icon (top nav)	Add/update/remove items, proceed to checkout, PayPal payment option
Login	/account/login	Email + password sign-in
Registration	/account/register	New account creation
Password Reset	/account/reset-password	Forgot password flow

Area	URL / Location	Notes
Footer Links	Shop / Learn / Care sections	New arrivals, Coffee, Tea, Equipment, Brew guides, Shipping & returns, Track an order, Contact us

2.2 Out of Scope

- EverShop admin panel / backend administration (not exposed on this public demo).
- Actual completion of real monetary transactions via PayPal (use sandbox/test mode only, if available; otherwise validate up to the payment redirect).
- Underlying server infrastructure, hosting, and deployment pipeline.
- Load/stress testing directly against the shared public demo (to avoid impacting other users) — recommend a dedicated or local instance for performance testing instead.

3. Test Strategy

3.1 Types of Testing

- Functional Testing — verify each feature listed in section 2.1 behaves per expected e-commerce behavior.
- Usability Testing — navigation clarity, variant selection UX, error messaging.
- Compatibility Testing — Chrome, Firefox, Safari, Edge; desktop, tablet, mobile.
- Responsive/Visual Testing — layout integrity at common breakpoints (320px–1920px).
- Negative/Boundary Testing — invalid inputs on login, registration, quantity, and checkout fields.
- Security (Baseline) Testing — HTTPS enforcement, session handling, input sanitization on forms.
- Regression Testing — re-verify affected areas after any observed defect fix (where applicable, in a controlled instance).

3.2 Test Approach

Testing will be primarily manual and exploratory given this is a third-party public demo without a controllable backend. Test cases below are grouped by module and prioritized by criticality to the shopping journey (browse → product → cart → checkout → account). Any destructive or state-changing action (e.g., placing a real order) will be flagged and only executed if confirmed safe on this demo instance.

4. Test Environment

Component	Details
Application URL	https://demo.evershop.io/
Browsers	Chrome (latest), Firefox (latest), Safari (latest), Edge (latest)
Devices	Desktop (1920x1080, 1366x768), Tablet (iPad), Mobile (iPhone, Android)
Test Accounts	Newly registered test account(s); no reuse of real personal data
Payment	PayPal — sandbox/test mode only if available on this demo

Component	Details
Tools	Browser DevTools, JIRA/TestRail (defect & case tracking), Lighthouse (performance/accessibility audit)

5. Entry and Exit Criteria

5.1 Entry Criteria

- Demo site is reachable and returns expected homepage content.
- Test cases below are reviewed and test accounts are available.

5.2 Exit Criteria

- All planned test cases executed across at least two browsers.
- No open Critical/High severity defects on core flows (browse → cart → checkout).
- Defects logged with steps to reproduce, screenshots, and severity/priority.

6. Detailed Test Cases

6.1 Homepage

ID	Test Case	Expected Result	Priority
TC-01	Load homepage and verify hero banner/carousel displays and auto-rotates	Banners ("Crafted With Care", "Premium Quality Products") display with images, headline, and CTA buttons	Medium
TC-02	Click carousel navigation dots (slide 1, slide 2)	Carousel switches to the corresponding slide	Low
TC-03	Click "Shop by category" links (Women, Men, Kids)	User is navigated to the corresponding category listing page	High
TC-04	Verify Featured Products grid displays product image, name, and price	All featured products render correctly with accurate price formatting	High
TC-05	Click a Featured Product card	User is navigated to that product's detail page	High
TC-06	Verify footer links (Shop, Learn, Care sections) are present and clickable	Each link navigates without a broken/404 page	Low

6.2 Category / Product Listing

ID	Test Case	Expected Result	Priority
TC-10	Navigate to a category page (e.g., /kids)	Page displays a grid of products belonging to that category	High
TC-11	Verify product images, names, and prices are consistent with the product detail page	No mismatched data between listing and detail views	Medium
TC-12	Test any available filter/sort controls (price, category)	Product list updates correctly per selected filter/sort	Medium

ID	Test Case	Expected Result	Priority
TC-13	Navigate to a category with no products (if any)	An appropriate "no products found" state is shown, not an error	Low

6.3 Product Detail Page

ID	Test Case	Expected Result	Priority
TC-20	Open a product with multiple color variants (e.g., Thermos - Yellow/Black)	Correct default variant, SKU, and price load; both color swatches are visible	High
TC-21	Select a different color swatch (e.g., Black)	Product image, SKU, and/or price update to reflect the selected variant	High
TC-22	Enter quantity value and click "Add to cart"	Item is added to cart with correct quantity and variant; cart indicator updates	Critical
TC-23	Enter invalid quantity (0, negative, non-numeric, or exceeding stock)	System blocks submission and shows a validation message	High
TC-24	Add to cart without selecting a required variant (if applicable)	System prompts user to select a variant before adding to cart	Medium
TC-25	Verify "Product Description" section renders (even if empty on demo data)	Section displays without layout breakage	Low
TC-26	Click a "You may also like" related product	User navigates to that related product's page	Medium
TC-27	Verify product image loads at full quality and supports zoom (if supported)	Image displays clearly with no broken image icon	Low

6.4 Cart

ID	Test Case	Expected Result	Priority
TC-30	Open cart after adding one item	Cart displays correct product, variant, quantity, unit price, and subtotal	Critical
TC-31	Update item quantity from within the cart	Line total and cart subtotal recalculate correctly	High
TC-32	Remove an item from the cart	Item is removed and totals update accordingly; empty-cart state shown if it was the last item	High
TC-33	Add multiple different products/variants to the cart	All items listed individually with correct details; no data cross-contamination between variants	High
TC-34	Refresh the page after adding items to cart	Cart contents persist (session or account-based) as expected	Medium
TC-35	Proceed to checkout from the cart	User is taken to the checkout/payment step with correct order summary	Critical

6.5 Checkout & Payment

ID	Test Case	Expected Result	Priority
TC-40	Proceed to checkout as a guest (if supported)	Checkout form collects shipping/contact details without forcing login	High
TC-41	Proceed to checkout as a logged-in user	Saved address/account details pre-fill where applicable	High
TC-42	Submit checkout form with missing required fields	Form displays field-level validation errors and does not proceed	High
TC-43	Submit checkout form with invalid email/phone/postal code formats	Appropriate format-validation errors are shown	Medium
TC-44	Select PayPal as payment method and proceed	User is redirected to PayPal's payment flow with correct order amount	Critical
TC-45	Cancel/back out of the PayPal payment flow	User is returned to the store without an order being incorrectly marked as paid	High
TC-46	Verify order summary totals (subtotal, shipping, tax if any, grand total) before payment	All totals are mathematically correct and match cart contents	Critical

6.6 Account: Registration, Login, Password Reset

ID	Test Case	Expected Result	Priority
TC-50	Register a new account with valid unique email and password	Account is created successfully and user is logged in or redirected as designed	High
TC-51	Register using an email that already exists	System shows a clear "account already exists" error, no duplicate created	High
TC-52	Register with a weak/short password (if policy exists)	Validation message enforces password requirements	Medium
TC-53	Login with valid email and password	User is authenticated and redirected to account/home	Critical
TC-54	Login with incorrect password	Generic error is shown; account is not locked out prematurely and no sensitive info is leaked	High
TC-55	Login with unregistered email	Appropriate error shown without revealing whether the email exists (security best practice)	Medium
TC-56	Click "Forgot your password?" and submit a registered email	Password reset email/flow is triggered with confirmation message shown	High
TC-57	Click "Create an account" link from login page	User is navigated to /account/register	Low
TC-58	Logout from an authenticated session	Session is terminated; protected pages are no longer accessible without re-login	High

6.7 Cross-Cutting: Responsive, Compatibility & Basic Security

ID	Test Case	Expected Result	Priority
TC-60	Load homepage, PDP, cart, and checkout at mobile width (375px)	Layout adapts responsively; no horizontal scroll or overlapping elements	High

ID	Test Case	Expected Result	Priority
TC-61	Load key pages in Chrome, Firefox, Safari, and Edge	Visual and functional consistency across browsers	Medium
TC-62	Verify all pages are served over HTTPS	No mixed-content warnings; padlock/secure indicator present	High
TC-63	Attempt XSS/script injection in login, registration, and search fields	Input is sanitized/escaped; no script execution occurs	Critical
TC-64	Access an authenticated-only page (e.g., account dashboard) while logged out	User is redirected to login, not shown protected content	High
TC-65	Run a Lighthouse audit on homepage and PDP	Performance, accessibility, and SEO scores are recorded as a baseline; no Critical accessibility violations	Medium

7. Risk Assessment

Risk	Impact	Mitigation
Public shared demo — test data may be altered by other testers concurrently	Medium	Use unique, clearly-labeled test data; avoid relying on data persistence between sessions
No access to admin panel to verify backend state (orders, inventory)	Medium	Validate via UI-visible confirmations (order confirmation page/email) only
PayPal flow may not be in sandbox mode on a public demo	High	Stop short of completing real payment; verify up to redirect and document as a limitation
Site content/data may change between test cycles	Low	Re-verify assumed product names/prices/URLs at the start of each test cycle

8. Deliverables

- This Test Plan document
- Executed test case results (pass/fail) per section 6
- Defect log with severity/priority and reproduction steps
- Cross-browser/responsive test summary
- Lighthouse performance/accessibility baseline report

9. Approval

This test plan requires review and sign-off from the following stakeholders prior to test execution:

Name	Role	Signature	Date
	QA Lead		
	Product Owner		

Q2: TEST CHECKLIST

EverShop Demo Store — Login, Registration & Checkout

This checklist provides validation points for the Login, Registration, and Checkout features of the EverShop demo storefront (<https://demo.evershop.io/>). Each item includes the validation point, the expected result, and a status column for recording Pass/Fail during execution.

Login Checklist

Test Area	Validation Point	Expected Result	Status
Login	Verify the Login page loads with Email and Password fields and a "Sign In" button	Login page renders correctly with all required fields and controls visible	☐ P ☐ F
Login	Login with a valid registered email and correct password	User is authenticated and redirected to the account/home page	☐ P ☐ F
Login	Login with a valid email and an incorrect password	Generic error message is displayed; login is rejected	☐ P ☐ F
Login	Login with an email that is not registered	Error message is displayed without confirming/denying account existence	☐ P ☐ F
Login	Login with the Email field left blank	Field-level validation error is shown; form does not submit	☐ P ☐ F
Login	Login with the Password field left blank	Field-level validation error is shown; form does not submit	☐ P ☐ F
Login	Login with both fields left blank	Validation errors shown for both fields; form does not submit	☐ P ☐ F
Login	Login with an invalid email format (e.g., "user@")	Email format validation error is shown	☐ P ☐ F
Login	Login with leading/trailing spaces in the email field	Email is trimmed and login processes normally, or a validation message is shown	☐ P ☐ F
Login	Verify password field masks input characters	Entered password is displayed as dots/asterisks, not plain text	☐ P ☐ F
Login	Verify a "show/hide password" toggle, if present	Toggling switches between masked and plain text correctly	☐ P ☐ F
Login	Click "Forgot your password?" link	User is navigated to the password reset page	☐ P ☐ F
Login	Click "Create an account" link	User is navigated to the registration page	☐ P ☐ F
Login	Attempt multiple consecutive failed logins	Account lockout, CAPTCHA, or rate-limiting is triggered per security policy (or reasonable delay is enforced)	☐ P ☐ F

Test Area	Validation Point	Expected Result	Status
Login	Verify SQL injection input in email/password fields (e.g., " OR 1=1 --)	Input is sanitized/rejected; no unauthorized access is granted	☐ P ☐ F
Login	Verify XSS/script injection input in login fields	Input is escaped/sanitized; no script executes	☐ P ☐ F
Login	Login and verify session persists across page navigation	User remains logged in while browsing other pages	☐ P ☐ F
Login	Login, then refresh the browser	User session persists and remains logged in after refresh	☐ P ☐ F
Login	Login successfully and verify redirect target	User is redirected to the intended page (home/account/previous page as designed)	☐ P ☐ F
Login	Verify "Sign In" button is disabled or shows a loading state while request is in progress	Prevents duplicate submissions during processing	☐ P ☐ F
Login	Login using the Enter/Return key after filling both fields	Form submits the same as clicking "Sign In"	☐ P ☐ F
Login	Verify page is served over HTTPS	Connection is secure; no mixed-content warnings	☐ P ☐ F
Login	Logout after successful login	Session is terminated and user is redirected appropriately; protected pages are no longer accessible	☐ P ☐ F
Login	Verify login form is accessible via keyboard-only navigation (Tab/Enter)	All fields and the submit button are reachable and operable via keyboard	☐ P ☐ F
Login	Verify login page renders correctly on mobile viewport	Layout is responsive with no overlapping or cut-off elements	☐ P ☐ F

Registration Checklist

Test Area	Validation Point	Expected Result	Status
Registration	Verify the Registration page loads with all required fields (name, email, password, confirm password, etc.)	Registration form renders correctly with all expected fields and a submit button	☐ P ☐ F
Registration	Register with valid, unique details in all required fields	Account is created successfully and a confirmation is shown/redirect occurs	☐ P ☐ F
Registration	Register using an email address that already has an account	Error message indicates the account/email already exists; no duplicate is created	☐ P ☐ F
Registration	Submit the form with the Email field left blank	Field-level validation error is displayed; form does not submit	☐ P ☐ F
Registration	Submit the form with the Password field left blank	Field-level validation error is displayed; form does not submit	☐ P ☐ F

Test Area	Validation Point	Expected Result	Status
Registration	Submit the form with any other required field left blank	Validation error is shown for each missing required field	☐ P ☐ F
Registration	Enter an invalid email format (e.g., "user@@test")	Email format validation error is displayed	☐ P ☐ F
Registration	Enter a password shorter than the minimum required length	Password policy validation error is displayed	☐ P ☐ F
Registration	Enter a password that does not meet complexity rules (if any), e.g., no numbers/symbols	Validation message specifies the password requirements	☐ P ☐ F
Registration	Enter mismatched values in Password and Confirm Password fields	Validation error indicates the passwords do not match	☐ P ☐ F
Registration	Enter a valid password and matching confirmation	No mismatch error is shown; form proceeds	☐ P ☐ F
Registration	Verify password field(s) mask input characters	Entered password is displayed as dots/asterisks, not plain text	☐ P ☐ F
Registration	Enter a name field with numbers or special characters (if not allowed)	Validation error is shown, or input is rejected per business rules	☐ P ☐ F
Registration	Enter an email with leading/trailing spaces	Email is trimmed automatically, or a validation message is shown	☐ P ☐ F
Registration	Verify a required Terms & Conditions checkbox (if present) blocks submission when unchecked	Form does not submit until the checkbox is checked	☐ P ☐ F
Registration	Verify XSS/script injection input in name/email fields	Input is sanitized/escaped; no script executes	☐ P ☐ F
Registration	Verify SQL injection input in email/password fields	Input is sanitized/rejected; no unauthorized data access occurs	☐ P ☐ F
Registration	Register successfully and verify a confirmation email is triggered (if applicable)	Confirmation/welcome email is sent to the registered address	☐ P ☐ F
Registration	Click "Create an account" link from the login page to reach registration	User is correctly navigated to the registration form	☐ P ☐ F
Registration	After successful registration, verify user can immediately log in (or is auto-logged-in)	New credentials authenticate successfully	☐ P ☐ F
Registration	Verify "Register"/"Submit" button is disabled or shows a loading state during submission	Prevents duplicate account creation from repeated clicks	☐ P ☐ F
Registration	Verify maximum field length limits (e.g., very long email or name)	Input is truncated or rejected gracefully with a clear message	☐ P ☐ F
Registration	Verify page is served over HTTPS	Connection is secure; no mixed-content warnings	☐ P ☐ F
Registration	Verify registration form is accessible via keyboard-only navigation	All fields and the submit button are reachable and operable via keyboard	☐ P ☐ F
Registration	Verify registration page renders correctly on mobile viewport	Layout is responsive with no overlapping or cut-off elements	☐ P ☐ F

Checkout Checklist

Test Area	Validation Point	Expected Result	Status
Checkout	Proceed to checkout from a cart containing at least one item	User is navigated to the checkout page with an accurate order summary	☐ P ☐ F
Checkout	Attempt to proceed to checkout with an empty cart	System prevents checkout and prompts the user to add items	☐ P ☐ F
Checkout	Verify all cart items (product, variant, quantity, price) are correctly reflected in the checkout order summary	Order summary matches the cart contents exactly	☐ P ☐ F
Checkout	Verify subtotal, shipping, tax (if any), and grand total are calculated correctly	All totals are mathematically accurate and clearly labeled	☐ P ☐ F
Checkout	Checkout as a guest (if guest checkout is supported)	User can complete checkout without being forced to create an account	☐ P ☐ F
Checkout	Checkout as a logged-in user	Saved address/contact details (if any) are pre-filled correctly	☐ P ☐ F
Checkout	Submit the checkout form with required shipping fields left blank	Field-level validation errors are shown; form does not submit	☐ P ☐ F
Checkout	Enter an invalid email format in the checkout contact field	Email format validation error is displayed	☐ P ☐ F
Checkout	Enter an invalid phone number format (if field exists)	Phone format validation error is displayed	☐ P ☐ F
Checkout	Enter an invalid/incomplete postal or ZIP code	Postal code validation error is displayed	☐ P ☐ F
Checkout	Select a shipping method/option (if multiple are offered)	Shipping cost and total update correctly based on the selected method	☐ P ☐ F
Checkout	Apply a valid coupon/discount code (if supported)	Discount is applied correctly and reflected in the updated total	☐ P ☐ F
Checkout	Apply an invalid or expired coupon code	Clear error message is shown; total remains unchanged	☐ P ☐ F
Checkout	Select PayPal as the payment method and proceed	User is redirected to PayPal with the correct order amount	☐ P ☐ F
Checkout	Cancel or back out of the PayPal payment flow	User returns to the store without the order being marked as paid	☐ P ☐ F
Checkout	Complete a successful payment (in sandbox/test mode)	Order confirmation page is displayed with an order number and summary	☐ P ☐ F
Checkout	Verify an order confirmation email is sent after successful checkout	Confirmation email is received with correct order details	☐ P ☐ F
Checkout	Attempt to edit the cart (e.g., open cart in another tab) during checkout	System handles concurrent cart changes gracefully without corrupting the order	☐ P ☐ F
Checkout	Verify "Place Order"/"Pay" button is disabled or shows a loading state during submission	Prevents duplicate order submissions from repeated clicks	☐ P ☐ F

Test Area	Validation Point	Expected Result	Status
Checkout	Refresh the browser mid-checkout before payment is completed	No duplicate order is created; cart/session state is handled gracefully	☐ P ☐ F
Checkout	Verify checkout page is served over HTTPS	Connection is secure; no mixed-content warnings; padlock indicator present	☐ P ☐ F
Checkout	Verify no sensitive payment data (card numbers, etc.) is exposed in page source or logs	No sensitive data is visible in HTML source, browser storage, or console logs	☐ P ☐ F
Checkout	Verify billing address can be set same as or different from shipping address	Toggle/option works correctly and both addresses are captured accurately when different	☐ P ☐ F
Checkout	Verify checkout flow on a mobile viewport	Layout is responsive with all fields and buttons accessible and usable	☐ P ☐ F
Checkout	Verify order summary and payment step are accessible via keyboard-only navigation	All fields, checkboxes, and buttons are reachable and operable via keyboard	☐ P ☐ F
